

**Full Stack Web Development**

**Exercise**

**Job Connector Program**

# Exercise

Continue the previous exercise by enhancing the to-do list application with the following features:

- **Filter & Sort** – Add a dropdown or buttons to filter tasks by status (completed or pending), and implement sorting by creation date (newest or oldest).
- **Search Task** – Create a search bar to filter tasks in real time as the user types a keyword.
- **Edit Inline** – Allow users to double-click on a task title to switch it into an editable text field, and save the changes when confirmed.

# Thank you
